Mr. Bob Lamme  
West Brook Maintenance  
HOBART BROTHERS COMPANY  
600 W. Main  
Troy, Ohio 45373

Dear Mr. Lamme:

I am enclosing the results of the chemical analyses performed on the water samples submitted to us. Since I am not sure where the samples originated, it is difficult to interpret the significance. However there are several items which are of concern:

1. There is detectable lead in all samples of well water and the levels approach the limit of 50 ug/l established as the Primary Drinking Water Standard. I have checked with the Miami Conservancy and the Ohio EPA, and the only source of lead in the Troy area could be a battery manufacturing plant which is located nearby. Neither agency know the name of the battery plant nor its location. The Ohio EPA mentioned that the plant did have problems several years ago and was disposing of wastes on the ground. If this information is correct, the lead could have leached into the ground water. Would you please check and see if there are any battery manufacturing plants in the nearby area and their location.
2. There is a slight problem with nitrate in some of the samples. In the water samples labeled Hobart House, North Well, Hines Builders, and Railroad House, we found significant levels of nitrate. Although no samples exceeded 10 mg/l (Drinking Water Standard), the levels are appreciable. I would judge that the nitrate is probably due to inorganic fertilizer which was applied to fields in the area and leached into the ground water.
3. Analysis of the #3 Well-C South sample indicates very high levels of chloride, sulfate and other dissolved salts. Our analysis also indicates very high levels of ammonia (90 ppm) along with traces of heavy metals. The lead level exceeds the Drinking Water Standard of 50 mg/l. In general, this water is not acceptable for drinking purposes. I suggest that you look for an alternate source of water if this water is used for drinking.

Mary -

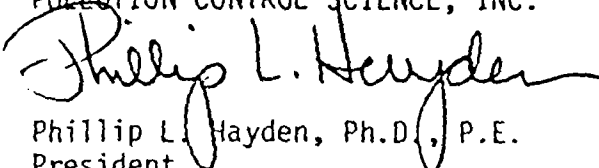

This well has not  
been used for drinking  
water, and is now  
closed.

Mr. Bob Lammie
